- OPERATION
- MAINTENANCE
- PARTS LIST

Model Nos.
127-335A
127-335-300

Important:

**Read Safety Rules and
Instructions Carefully**

20"
REAR DISCHARGE
SELF PROPELLED
ROTARY MOWER

IMPORTANT

It is suggested that this manual be read in its entirety before attempting to assemble or operate. Keep this manual in a safe place for future reference and for ordering replacement parts.

This unit is shipped WITHOUT GASOLINE or OIL. After assembly, see operating section of this manual for proper fuel and amount.

Your rotary mower is a precision piece of power equipment, not a plaything. Therefore exercise extreme caution at all times.

SAFE OPERATION PRACTICES FOR WALK-BEHIND MOWERS

TRAINING

1. Read the Operating and Service Owner's Manual carefully. Be thoroughly familiar with the controls and the proper use of the equipment.
2. Never allow children to operate a power mower. Only persons well acquainted with these rules of safe operation should be allowed to use your mower.
3. Keep the area of operation clear of all persons, particularly small children and pets. Stop engine when they are in the vicinity of your mower. Although the area of operation should be completely cleared of foreign objects, a small object may have been overlooked and could be accidently thrown by the mower in any direction.

PREPARATION

1. Thoroughly inspect the area where the equipment is to be used and remove all stones, sticks, wire, bones and other foreign objects which could be picked up and thrown by the mower in any direction.
2. Do not operate equipment when barefoot or wearing open sandals. Always wear substantial footwear.
3. Do not wear loose fitting clothing that could get caught on the mower.
4. Check the fuel before starting the engine. Do not fill the gasoline tank indoors, when the engine is running, or while the engine is still hot. Wipe off any spilled gasoline before starting the engine.
5. Disengage the self-propelled mechanism or drive clutch on units so equipped before starting the engine.
6. Never attempt to make a wheel or cutting height adjustment while the engine is running.
7. Mow only in daylight or in good artificial light.
8. Never operate the equipment in wet grass. Always be sure of your footing; keep a firm hold on the handle and walk, never run.

OPERATION

1. Do not change the engine governor settings or overspeed the engine. Excessive engine speeds are dangerous.
2. Do not put hands or feet near or under rotating parts. Keep clear of the discharge opening at all times.
3. Stop the blade(s) when crossing gravel drive, walks or roads.
4. After striking a foreign object, stop the engine, remove the wire from the spark plug, thoroughly inspect the mower for any

damage, and repair the damage before restarting and operating the mower.

5. If the equipment should start to vibrate abnormally, stop the engine and check immediately for the cause. Vibration is generally a warning of trouble.
6. Stop the engine whenever you leave the mower, before cleaning the mower housing, and when making any repairs or inspections.
7. When cleaning, repairing or inspecting, make certain the blade and all moving parts have stopped. Disconnect the spark plug wire, and keep the wire away from the plug to prevent accidental starting.
8. Before attempting to unclog the mower or discharge chute, stop the engine and be sure the blade(s) have stopped completely. Disconnect the spark plug wire and keep the wire away from the plug to prevent accidental starting.
9. Do not run the engine indoors.
10. Shut the engine off and wait until the blade comes to a complete stop before removing the grass catcher.
11. Mow across the face of slopes, never up-and-down. Exercise extreme caution when changing direction on slopes. Do not mow excessively steep slopes.
12. Always disconnect electric mowers (line operated) before cleaning, repairing or adjusting.
13. Never operate mower without proper guards, plates or other safety protective devices in place.
14. Keep washout ports and other mower-housing service openings closed when mowing.
15. **DO NOT OPERATE** this mower with the chute doors open, unless the complete grass catcher is properly mounted on the mower.

MAINTENANCE AND STORAGE

1. Check the blade and engine mounting bolts at frequent intervals for proper tightness.
2. Keep all nuts, bolts, and screws tight to be sure the equipment is in safe working condition.
3. Never store the equipment with gasoline in the tank inside of a building where fumes may reach an open flame or spark. Allow the engine to cool before storing in any enclosure.
4. To reduce fire hazard, keep the engine free of grass, leaves, or excessive grease.
5. Check the grass catcher bag frequently for wear or deterioration. For safety protection replace only with new bag meeting original equipment specifications.

ASSEMBLY

NOTE

Reference to Left or Right side of machine is from operator's position at the handle facing forward.

The Lawn Mower, except the handle, throttle control and grass catcher is fully assembled, packed and shipped in one container.

FIGURE 1

ATTACHING THE HANDLE

1. The throttle is attached to the engine. Extend the throttle control and lay it on the floor. Be careful not to bend or kink the wire.
2. Attach the lower handle over the pins on the handle brackets located on the rear of the mower. (See figure 1.)

FIGURE 2

NOTE

It may be necessary to squeeze the ends of the lower handle in slightly to assure a snug fit against the handle brackets.

NOTE

There are two (2) holes in the handle mount brackets. Place the lower handle against the brackets and secure with hair pin in second hole. Second hole is for operation. First hole is for storage.

3. Place the two cotter hairpins in the holes in the pins.
4. Assemble the upper handle with the engagement lever attached, to the lower handle with the two knobs. Make sure the single hole for the throttle is on the left side of the handle. The knobs can be either to the inside or the outside of the handle. (See figure 2.)

NOTE

There are two height positions for the handle. See the Operation section of this handbook for adjustment.

5. Assemble the throttle control to the upper handle with the nut and bolt. (See figure 3.)

FIGURE 3

6. Secure the throttle control wire and clutch wire to the lower handle with the cable ties. (See figure 4.)

3 FIGURE 4

ASSEMBLY—GRASS CATCHER

The grass catcher is partially assembled. The hardware needed is in the hardware pack. It consists of:

- 7 bolts 3/8" long
- 4 bolts 1" long
- 11 lockwashers
- 11 nuts
- 2 cotter pins

1. Thread the rear frame through the bag. See figure 5.
2. Place the ends of the upper frame inside the bag.
3. Assemble the rear frame to the front frame with the four 1" bolts, lockwashers and nuts. See figure 6.
4. Fasten the bag to the frame with the 7 bolts 3/8" long, lockwashers and nuts. Start the three holes on the top of the bag, then do both sides.
5. Fit the lower edge of the bag into the slot in the bottom of the front frame and place the two cotter pins through the eyelets in the bag.
6. Open up the legs of the cotter pins to secure them.

7. Close the top of the bag by stretching the elastic over the upper frame.

WARNING

Never operate the mower with the bag open.

FIGURE 5

FIGURE 6

OPERATION

Before starting the engine fill the crankcase with oil.

WARNING

The mower shall not be operated without the entire grass catcher or rubber protective shield in place.

NOTE

Under normal usage the grass catcher bag material is subject to wear and should be checked periodically.

This mower is designed to be operated at full throttle to give you the best cut and do the most effective job of bagging the cut grass.

FIGURE 7

HANDLE POSITION

The upper handle can be adjusted to a high or low position. The operator of the lawn mower can easily adjust the handle position by unscrewing the two knobs, removing the two bolts and reassembling in the other position. No tools are necessary to make this adjustment. (See figure 7.)

ATTACHING GRASS CATCHER

The doors shown in figure 8 cannot be opened to discharge the grass unless the grass catcher is in place.

WARNING

Under no circumstances should the doors be opened while the engine is operating.

1. Attach the grass catcher frame to the front of the adapter as shown in figure 9.
2. Push down on the back of the bag until the entire grass catcher seats into the bracket.
3. Move the locking lever towards the rear of the mower. (See figure 10.) This locks the grass catcher in place and opens the doors.
4. To remove the grass catcher, unlock the locking lever and lift off the grass catcher.

FIGURE 8

FIGURE 9

FIGURE 10

THROTTLE CONTROL

Your engine has an automatic choke. The throttle control is used to regulate the engine speed and stop the engine. The engine can be started with the throttle control lever anywhere in the START position. Move the throttle control to the rear to the STOP position to stop the engine. (See figure 11.)

FIGURE 11

Squeezing the clutch control engages the drive mechanism to the front wheels. Releasing the clutch control stops the front wheels from driving. Release the clutch control to slow down when negotiating an obstacle, making a turn or stopping. (See figures 12 and 13.)

FIGURE 12

The blade continues to rotate when the clutch is released.

FIGURE 13

Start the engine from the right side by lifting up on the starter handle and placing your foot on the mower deck. (See figure 14.)

FIGURE 14
HEIGHT ADJUSTMENT

Before changing the cutting height, stop the engine and disconnect the spark plug wire. Adjustments may be made by moving the height adjustment lever on each wheel to the desired position. (See figure 15.) There are five cutting heights. All four height adjusters should be in the same relative position.

FIGURE 15

HANDLE STORAGE

The handle can be stored in the upright position to take less room. Grasp the lower handle at the bottom, pull apart slightly and tip the handle forward. It will lock in this position. Reverse this procedure to place the handle in the operating position. (See figure 16.)

FIGURE 16
FOLDING THE HANDLE

The handle can be folded completely for storage. To fold the handle, loosen the black plastic knobs on each side of the handle, swing the upper handle down as you pivot the lower handle forward. (See figures 17 and 18.)

The following maintenance and adjustment instructions are primarily for the mower. For the engine refer to the Engine Operating and Maintenance manual packed with this mower.

FIGURE 17

FIGURE 18

MAINTENANCE

WHEEL LUBRICATION

Each rear wheel has two ball bearings and each front wheel has a sintered iron sleeve bearing that requires periodic lubrication. Place a few drops of light oil on each bearing at the start of each mowing season.

CUTTING BLADE

The blade may be removed for sharpening or replacement as follows:

1. Remove the large bolt and lockwasher holding the blade and adapter to the engine crankshaft.
2. Remove the blade and adapter from the crankshaft.
3. Be careful not to lose the key on the crankshaft. (See figure 19.)

When sharpening the blade, follow the original angle of grind as a guide. It is extremely important that each cutting edge receives an equal amount of grinding to prevent an unbalanced blade. An unbalanced blade will cause excessive vibration when rotating at high speeds and may cause damage to the mower.

The blade can be tested for balance by balancing it on a screwdriver. Remove metal from the heavy side until it balances evenly. (See figure 20.)

NOTE

When replacing the blade, be sure the side of the blade marked "Bottom" or having the part number is facing the ground when the mower is in the operating position.

FIGURE 19

CLUTCH CONTROL ADJUSTMENT

1. To increase belt tension, loosen jam nut and backoff two or three threads. (See figure 20.)
2. Thread the barrel nut on end of control cable inward two or three threads, and retighten jam nut.
3. To decrease belt tension, loosen jam nut and back off two or three threads.
4. Thread the barrel nut on end of control cable outward two or three threads, and retighten jam nut.

FIGURE 20

FIGURE 21

BELT REMOVAL

1. Remove both tension springs. (See figure 21.)
2. Remove the pinion cover.
3. Using a screw driver remove the E-rings and pinions on both wheels.
4. Remove the shoulder bolt, lockwashers and nut on the belt cover.
5. Slide the belt cover to the left.
6. Unhook the belt from the idler and the pulleys.
7. Remove the shoulder bolt, lockwasher and nut from the cover support bracket.
8. Remove belt and reassemble in reverse order with a new belt.

OFF-SEASON STORAGE

If the machine is to be inoperative for a period longer than 30 days, the following procedures are recommended:

1. Working outdoors, drain all fuel from the fuel tank. Use a clean dry cloth to absorb the small amount of fuel remaining in the tank, then run the engine until all fuel in the carburetor is exhausted.

WARNING

Do not drain fuel while smoking, or if near an open fire.

2. Drain all the oil from the crankcase (this should be done after the engine has been operated and is still warm) and refill the crankcase with clean new oil.
3. Disconnect the spark plug wire and remove the spark plug from the cylinder. Pour about 2 or 3 tablespoons of engine oil into the cylinder, and then turn the engine over several times to spread out the oil. Replace the spark plug, but do not connect the wire.
4. Clean the engine and the entire mower thoroughly.

*For faster service, obtain standard nuts, bolts and washers locally. If these items cannot be obtained locally, order by part number and size as shown on the parts list.

(462—Red Flake) When ordering parts if color or finish is important, use the appropriate color code shown at left. (e.g. Red Flake Finish—12982(462))

The engine is not under warranty by the mower manufacturer. If repairs or service is needed on the engine, please contact your nearest authorized engine service outlet. Check the "Yellow Pages" of your telephone book under "Engines — Gasoline."

*For faster service obtain standard nuts and bolts locally. If these items cannot be obtained locally, order by part number and size as shown on the parts list.

NOTE

The manufacturer DOES NOT recommend the use of any accessory on this Rotary Mower other than those manufactured by MTD Products Inc.

WARNING

DO NOT operate the mower with the chute doors open unless the complete grass catcher is properly mounted on the mower.

NOTE

Under normal usage bag material is subject to wear and should be checked periodically. Be sure any replacement bag complies with the mower manufacturer's recommendations.

For replacement bags, use only factory authorized replacement bag No. 764-0150.

IMPORTANT

After striking a foreign object, stop the engine, remove wire from spark plug. Thoroughly inspect the mower for any damage, and repair the damage before restarting and operating the mower.

PARTS INFORMATION

POWER EQUIPMENT PARTS AND SERVICE

Parts and service for all MTD manufactured power equipment are available through the authorized service firms listed below. All orders should specify the model number of your unit, parts numbers, description of parts and the quantity of each part required.

WARRANTY PARTS AND SERVICE POLICY

The purpose of warranty is to protect the customer from defects in workmanship and materials, defects which are NOT detected at the time of manufacture. It does not provide for the unlimited and unrestricted replacement of parts. Use and maintenance are the responsibility of the customer. The manufacturer cannot assume responsibility for conditions over which it has no control. Simply put, if it's the manufacturer's fault, it's the manufacturer's responsibility; if it's the customer's fault, it's the customer's responsibility.

CLAIMS AGAINST THE MANUFACTURER'S WARRANTY INCLUDES

1. Replacement of Missing Parts on new equipment.
2. Replacement of Defective Parts within the warranty period.
3. Repair of Defects within the warranty period.

All claims MUST be substantiated with the following information:

1. Model Number of unit involved.
2. Date unit was purchased or first put into service.
3. Date of failure.
4. Nature of failure.
